

## Getting Decent Graphs from PSpice

For many of the pre-labs in the first half of this course, you will be using PSpice to simulate an electronic circuit and will produce a plot as your product. The graphics in PSpice are crude, but are acceptable for a laboratory notebook.

PSpice will default, however, to taking up the entire page if you do not adjust a couple of settings. What you want is a graph like this:

This graph is small enough that you can cut it out and tape it into your notebook. To get this size graph, all you have to do is go to the “Page Setup” window and set the orientation to “Portrait” and the left, right, top, and bottom margins to 1 inch, 1 inch, 1 inch, and 5 inches, respectively.
